

The Geutebrück Company Profile 2026

The secure way to more transparency

Geutebrück develops and manufactures intelligent video security solutions that are Made in Germany. These systems protect people, facilities, buildings and intellectual property while ensuring the highest standards of data protection and cybersecurity.

Cybersecurity and privacy are fundamental design principles of all Geutebrück systems. The software and hardware comply with the EU General Data Protection Regulation (GDPR) and the company is certified according to ISO/IEC 27001, the internationally recognised standard for information security management. Secure system architectures, encrypted communication and strict access controls protect video data from manipulation and unauthorised access.

Geutebrück solutions provide full transparency across operational processes. They document transport and production workflows throughout the entire supply chain, enabling companies to monitor procedures, working conditions, and quality or hygiene standards in real time.

When a critical situation is detected, the system automatically initiates predefined alarm sequences. Within seconds, multiple measures can be triggered simultaneously: additional cameras are activated, access points are secured, and emergency services receive site plans, images and clear instructions. Depending on the scenario, the system can lock doors and gates, trigger anti-theft measures such as fogging, or stop production lines.

Geutebrück solutions combine AI-supported video analytics with Industry 4.0 processes and are used worldwide in industrial facilities, critical infrastructure, financial institutions, government organisations, healthcare, research, museums and public transport.

A Geutebrück solution:

- Saves valuable seconds in emergencies through individually defined alarm sequences
- Locates incorrectly stored or lost goods via track & trace, even weeks later
- Automates and visualises building and facility management systems
- Documents incidents, accidents, damage to goods and transfers of liability through video evidence
- Combines AI-based video analytics with Industry 4.0 processes
- Detects risks and irregularities in real time

Furthermore:

- Support the investigation of fraud attempts and manipulation, even retrospectively
- Store video data in compliance with the GDPR
- Allow work areas, faces or hands to be anonymised through pixelation if required
- Integrate seamlessly with third-party systems such as access control, scales, barcode or RFID systems and temperature sensors via open interfaces
- Use the tamper-proof GBF video format, recognised as evidence in court in many countries
- Are supported by exceptional consulting, project planning and technical support, as well as training on site or through the Geutebrück Academy

GEUTEBRÜCK

For more than 55 years, organisations around the world have relied on Geutebrück technology for stable systems, reliable evidence video and long-term compatibility.

Geutebrück GmbH, headquartered in Windhagen near Bonn, Germany, was founded in 1970 by Thomas Geutebrück. Today the company is led by the second generation: Katharina Geutebrück and Christoph Hoffmann, supported by an international network of employees, subsidiaries and partners serving customers worldwide.
