

PECUNIA

Video uplink

PECUNIA is the leading integrated cash management system for CITs and their partners. Order management, logistics planning and monitoring, money processing and an internet platform including track & trace options offer a state of the art system designed for highest security and efficiency demands.

PECUNIA is furnished with multiple security features including a rich access restriction system for employees and workplaces.

- **Video surveillance:** Cashcenter processes are constantly monitored by video camera. Via Pecunia video interface key data as safebag numbers, customer numbers or default amounts are sent to the video system. This data is stored together with the video stream. Therefore queries along different criteria as safebag numbers, or counting differences of a certain amount become possible.
- **Protocol:** An audit compliant logging of all process steps guarantees transparency and minimizes the risk of any losses.
- **Access rights and user profiles:** Unauthorized external access can be blocked efficiently by definition of user roles and their access to software functionality.
