

Security management and video security ideally linked together. Software house and Geutebrück - C·CURE 9000-2.6 and G-Core

With the Geutebrueck network interface G-Link / CCure9000-2.6, you can easily link the C·CURE 9000 Security Management System with our G-Core video management software. The data exchange between the systems is bidirectional. Access control data, such as opening or closing doors, starting the automatic recording of the assigned camera players as well as the display of live images. Conversely, you control the opening or locking of doors via the Geutebrueck system. The status of the doors (open, closed) can be graphically displayed and remotely controlled in G-SIM maps.

The ideal cooperation:

- Convenient interface to C·CURE 9000 via the Geutebrueck Integration Server G-Link for bidirectional data exchange with G-Core and other third-party systems.
- Reliable visualization of access controls with the corresponding video images.
- Event-driven forwarding of videos to mobile devices is possible.
- Intrusions, card misuse or vandalism: nothing goes undetected.
- Control functions in G-Core for opening or unlocking selectable doors.
- Map-based operation with the Geutebrueck Security Information Management System G-SIM.
- Display of faults in the map (G-SIM) with automatic connection of the assigned video camera.

Recommended uses and applications

G-Link/CCure9000-2.6 is used to integrate the software company's security management system. Especially user-friendly with the graphical user interface in G-SIM.

Technical data

Designation	Function examples
Event messages from CCure9000:	Access information: Status door open/closed Invalid Batch (no access) Door Forced Open Door Held Open Monitoring Inputs/Outputs
	Event Mapping: Every CCure9000 message can trigger freely configurable G-Core actions. Camera activation, image storage, control of PTZ cameras, automatic forwarding of alarm images.8
G-Core actions control CCure9000:	Control data for opening and closing a door: Lock door Unlock door
Requirements:	G-Link server software (dongle) Order No. 3.06530
	Software option G-Link/activation Order No. 8.34148
	Software option G-Link/G-Core Order No. 8.34172
	G-Link server
Required licenses:	Software option G-Link/CCure9000-2.6 Order No. 8.34181
